Exam : **GB0-713**

Title : Deploy and Manage the H3C
CAS virtualization platform
V3.0

Vendor : H3C

Version : DEMO

NO.1 H3CCAS manages resources through a clear organizational hierarchical view. Which of the following statements about clusters in the hierarchical structure is incorrect?

- A. A host pool can contain multiple clusters
- B. Hosts can be added directly on the cloud resource page
- C. Only hosts added on the cluster page can implement HA
- D. Hosts in the cluster can implement dynamic resource adjustment

Answer: B

NO.2 The following are the advantages of SSD hard drives over SATA hard drives:

- A. Good random read and write performance
- B. Large hard disk capacity
- C. Low noise during operation
- D. No mechanical moving parts inside, no fear of vibration

Answer: ACD

NO.3 Which of the following statements about the functions and effects of the CVM module is correct?

- A. Each server needs to install CVM as the hypervisor layer of server virtualization
- B. CVM is responsible for server hardware resource management and virtual machine creation management
- C. If the server is only used for CVM management and not as a CVK computing resource, the server does not need to support hardware-assisted virtualization.
- D. CVM supports high availability (HA), dynamic resource scheduling (DRS), virtual machine backup, network policy templates and other functions

Answer: BCD

NO.4 Which of the following errors regarding virtual machine migration is

- A. Virtual machine migration refers to manually migrating a virtual machine to a different host and data storage, supporting offline migration and online migration
- B. Virtual machine migration includes changing the host, changing the storage, changing the host and storage
- C. When the virtual machine only changes the host, the destination host must be able to access the image file of the virtual machine
- D. Changing the host and storage means migrating the virtual machine to another host and migrating the virtual machine image file to other storage on the host. Only offline migration is supported.

Answer: D

NO.5 Which of the following statements about CVM management functions is correct?

- A. The virtual machine view management function allows maintenance personnel to customize the virtual machine directory based on actual business scenarios
- B. Cloud services are based on the virtualization function provided by CVM components, abstracting physical resources such as computing, storage, and network into elastic virtual resource pools that are provided on demand.

C. Host auto-discovery task management automatically searches for hosts that can be added and adds them to the cluster to which the task belongs.

D. The operation log records in detail all operations performed by operators on the CVM and provides a download function

Answer: ABCD

NO.6 Set the virtual machine startup priority. Which of the following statements is correct?

A. The virtual machine startup priority can be set to: default, low, medium, high

B. The virtual machine startup priority can be configured on the virtual machine or on the cluster

C. If the virtual machine startup priority is set to default, the startup priority set in the cluster will be used.

D. If both the virtual machine and the cluster set the startup priority (the virtual machine is set to non-default), the startup priority set in the cluster will take precedence.

Answer: ABC

NO.7 Which of the following statements about virtual machine templates is correct?

A. A virtual machine template is a copy of a virtual machine that is used to easily create and configure multiple new virtual machines.

B. The number of CPUs, memory size, and storage capacity in the virtual machine template cannot be modified

C. There are two ways to create a virtual machine template: convert to a template and clone to a template. The clone to template must be executed when the virtual machine is shut down.

D. The virtual machine template is saved in the "/vms/templet" local directory of the CVM host by default

Answer: AD

NO.8 Which of the following statements about alarm management is correct?

A. When a host goes down, the CVM console will record relevant information and generate an alarm

B. When the virtual machine cannot connect, an alarm can be generated

C. The alarm information records the alarm source, abnormality occurrence time, possible abnormality causes, recovery suggestions, etc.

D. Administrators can manually record maintenance experience

Answer: ABD

NO.9 Which of the following statements about the functions and effects of CVK components is correct?

A. Each server needs to install the CVK component

B. CVK supports ISCSI, FC, and NAS methods to mount storage resources

C. When a CVK and the cluster shared file system both fail, cluster HA can still migrate the virtual machines on the failed CVK to other CVKs

D. CVK host must support hardware-assisted virtualization

Answer: ABD
