Latest pdf braindumps provider, high pass rate

**Exam** : **GCSA**

**Title** : **GIAC Cloud Security  
Automation**

**Vendor** : **GIAC**

**Version** : **DEMO**

**NO.1** Which security control is most effective in protecting microservices from unauthorized access?

Response:

- A. Firewalls
- B. Load balancers
- C. Service-specific authentication and authorization
- D. Serverless computing

**Answer:** C

**NO.2** Which two risks are associated with improper secrets administration?

(Choose Two)

Response:

- A. Unauthorized access to sensitive data
- B. Hardcoding credentials in application code
- C. Enhanced system performance
- D. Increased monitoring complexity

**Answer:** A,B

**NO.3** Which of the following is an example of runtime security protection?

Response:

- A. Web Application Firewall (WAF)
- B. Static code analysis
- C. Manual vulnerability scans
- D. Reducing monitoring intervals

**Answer:** A

**NO.4** What are the benefits of using Configuration Management as Code?

Select all that apply

Response:

- A. Enhanced reproducibility and consistency across environments
- B. Increased manual intervention in infrastructure setup
- C. Faster recovery from infrastructure failures
- D. Decreased visibility into system configurations

**Answer:** A,C

**NO.5** What is the purpose of canary deployment?

Response:

- A. To test new features on a small subset of users
- B. To deploy updates to all users simultaneously
- C. To roll back changes in case of failures
- D. To monitor server performance

**Answer:** A

**NO.6** Which tool is commonly used for configuration management in cloud environments?

Response:

- A. Kubernetes
- B. Puppet
- C. Terraform
- D. Docker

**Answer:** B

**NO.7** How does cloud infrastructure integration contribute to DevOps practices?

Response:

- A. It introduces unnecessary complexity to the development process
- B. It facilitates scalability, flexibility, and automation
- C. It hinders collaboration between development and operations teams
- D. It slows down the deployment pipeline

**Answer:** B

**NO.8** What is the primary security concern associated with containers in cloud environments?

Response:

- A. Limited scalability
- B. Poor isolation between containers
- C. Increased operational costs
- D. Lack of monitoring tools

**Answer:** B

**NO.9** What role do container orchestration tools play in container security?

Response:

- A. They decrease the visibility into the health and performance of containers.
- B. They automatically fix any security vulnerabilities within containers.
- C. They help in managing and scaling containers securely and efficiently.
- D. They simplify networking between containers to the extent that no firewall rules are required.

**Answer:** C

**NO.10** What is the purpose of runtime security protection in cloud environments?

Response:

- A. To detect and prevent attacks in real-time
- B. To increase system performance
- C. To reduce the number of users
- D. To limit monitoring capabilities

**Answer:** A

**NO.11** In the context of GCSA, what role does Infrastructure as Code (IaC) play in cloud security?

Response:

- A. It reduces the flexibility of cloud resources.
- B. It enhances the physical security of cloud servers.

- C. It enables the automated setup and maintenance of cloud environments.
- D. It increases the dependency on manual interventions.

**Answer:** C

**NO.12** Which two security practices should be followed when using infrastructure as code?  
(Choose Two)

Response:

- A. Conducting security reviews of IaC templates
- B. Hardcoding credentials in IaC files
- C. Using automated testing to detect security issues
- D. Disabling version control for infrastructure code

**Answer:** A,C

**NO.13** Which security feature of Kubernetes is used to manage sensitive information like passwords, OAuth tokens, and SSH keys?

Response:

- A. Namespaces
- B. Service accounts
- C. Secrets
- D. Persistent volumes

**Answer:** C

**NO.14** What is the purpose of a Content Delivery Network (CDN) in cloud environments?

Response:

- A. Increase latency for users
- B. Improve the speed and availability of content delivery
- C. Reduce scalability
- D. Centralize content delivery to one location

**Answer:** B

**NO.15** How can Infrastructure as Code contribute to security in cloud environments?

(Select all that apply)

Response:

- A. By enabling consistent security configurations across environments
- B. By automating security testing of cloud resources
- C. By encrypting sensitive data in infrastructure code
- D. By restricting access to infrastructure code repositories

**Answer:** A,B
